</thead>
</table>
| To develop and maintain the appropriate tools (e.g., data mappings) needed to enable efficient data transfer between healthcare and clinical trial systems. | - Address the needs of multiple stakeholders;  
- Allows for direct use of eSource;  
- Permit optimal data entry for site staff;  
- Maintain transparency from data capture to data reporting. |

**History**
E2C was formed in 2014 to develop data mappings from the Continuity of Care Document (CCD) to CDASH. After completing the mappings for Demography, Concomitant Medications, Medical History, and Vital Signs, the team went hiatus in 2015. The team was re-formed in 2017 to continue work on the data mappings.

**Current Focus**
The team will complete a core set of data mappings from the CCD to CDASH and work on the FHIR to CDASH mappings.

**Stakeholders & Constituencies**
- Academic Researchers
- Biotechnology
- Biopharmaceutical & Pharmaceutical Sponsors
- Contract Research Organizations & Consultants
- Medical Devices, Diagnostics
- EHR vendors
- Regulatory Authorities
- Clinical Research Sites
- Standards Development Organizations
- TransCelerate Biopharma
- PhUSE

**Collaborations**
E2C works closely with the CDISC CDASH team, HL7, PhUSE, EHR vendors and others in the healthcare arena to ensure the

**Operation Model & Meetings**
- The team meets every other Thursday.  
- Ad hoc meetings are scheduled as needed.
